

ABSTRACT OF THE DISCLOSURE

A window regulator cable assembly method and system includes a window regulator cable arrangement having a cable drum wheel, a first top pulley wheel, a first bottom pulley wheel, and a cable. The cable drum wheel, the top pulley wheel and the bottom pulley wheel are in a spaced apart relationship. The cable is mounted to provide cable runs between the wheels. At least one wheel is spaced from another wheel by a semi-rigid tube that surrounds the associated cable run. The semi-rigid tube is under an axial load to maintain tension in the cable. The wheels are pivotally mounted in a rigid spaced apart relationship on a rigid frame to remove the axial load from the semi-rigid tube.
